

APIDAE

Bombus terrestris subsp. glumbumble

05/09/1992

Collected in the coast of the North Sea (it was only known from the Mediterranean Sea before).

It produces a fluid that causes melancholy. This fluid is used as an antidote for the hysteria that results from eating Alihotsy leaves.

EREBIDAE

Amata huebneri

05/09/1992

Collected from the only known extant individual, near to the Hogwarts Castle. Damage marks can be seen in the bark of the branches, due to self-harm.

Wasp-moth hybrid, giant and aggressive, painful sting

ARIONIDAE

Arion hortensis

05/09/1992

Collected from the only known extant individual, near to the Hogwarts Castle. Damage marks can be seen in the bark of the branches, due to self-harm.

Ron Weasley began vomiting slugs after his attempt to curse Draco Malfoy failed due to his broken wand.

MACROARANIDAE

Acromantula gigantea

05/09/1992

Forbidden Forest

small individuals of approx. 30 cm have been collected.

CANELLAE

Trorgssionis sp. 1

10/5/23

Between the bushes of Retama and Nerium

Blue colour of the skin indicates adaptation to the field conditions

CANELLAE

Trorgssionis schetelonica

10/5/23

Between the bushes of Retama and Nerium

Blue colour of the skin indicates adaptation to the field conditions
